An isolated nucleic acid molecule that encodes a plant protein or fragment thereof comprising a nucleic acid sequence selected from the group consisting of SEQ ID NO: 1 through SEQ ID NO: 25642.

2. The isolated nucleic acid molecule according to claim 1, wherein said plant protein is a wheat protein.

3. A substantially purified wheat protein or fragment thereof, wherein said wheat protein is encoded by a nucleic acid molecule that comprises a nucleic acid sequence selected from the group consisting of SEQ ID NO: 1 through SEQ ID NO: 25642.

A. A transformed plant having a nucleic acid molecule which comprises:

- (a) an exogenous promoter region which functions in a plant cell to cause the production of a mRNA molecule;
- (b) a structural nucleic acid molecule comprising a nucleic acid sequence selected from the group consisting of SEQ ID NO: 1 through SEQ ID NO: 25642 or complements thereof;
- a 3' non-translated sequence that functions in said plant cell to cause termination (c) of transcription and addition of polyadenylated ribonucleotides to a 3' end of said mRNA molecule.
- 5. The transformed plant according to claim 3, wherein said structural nucleic acid molecule is a complement of any of the nucleic acid sequences of SEQ ID NO: 1 through SEQ ID NO: 25642.
- 6. The transformed plant according to claim 4, wherein said plant is soybean, wheat, cotton or maize.
 - 7. The transformed plant according to claim 4, wherein said plant is maize.
 - 8. The transformed plant according to claim 4, wherein said plant is soybean.
 - 9. The transformed plant according to claim 4, wherein said plant is wheat.
 - 10. The transformed plant according to claim 4, wherein said plant is cotton.
